

Project Design Phase-II

Data Flow Diagram & User Stories

Date	28 June 2026
Name	Kavyasri meghana Karunakaram
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Data Flow Diagram (DFD)

A Data Flow Diagram (DFD) is a graphical representation that illustrates how data moves through a system. It shows the flow of information between users, processes, data storage, and outputs. A well-designed DFD helps in understanding system requirements by clearly explaining how data is received, processed, stored, and transferred within the application.

User Stories

USN-1: As a user, I can submit a network service request using the Service Catalog.

USN-2: As a user, I can enter all necessary information before sending my request.

USN-3: As a user, I can attach supporting files or documents to my request.

USN-4: As a user, I can view relevant form fields based on the selected request or device type.

USN-5: As a user, I can monitor the progress of my submitted request.

USN-6: As a user, I receive email updates whenever my request status changes.

USN-7: As an IT technician, I can access the network requests assigned to me.

USN-8: As an IT technician, I can modify the request status as work progresses.

USN-9: As an IT technician, I can record work notes and close completed requests.

USN-10: As an approver, I can review and either approve or reject network requests.

USN-11: As an approver, I can include remarks while making an approval decision.

USN-12: As an administrator, I can create and maintain Network Request catalog items.

USN-13: As an administrator, I can manage catalog variables and variable sets.

USN-14: As an administrator, I can configure UI Policies to display dynamic form fields.

USN-15: As an administrator, I can automate workflows using Flow Designer.

USN-16: As an administrator, I can create and manage the Network Request database table.

USN-17: As an administrator, I can configure automatic email notifications.

USN-18: As an administrator, I can generate reports and track overall request performance.
