Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming is a creative problem-solving method that encourages team members to openly share their thoughts and suggestions in a positive and supportive environment. Every idea is considered valuable during the discussion, allowing participants to think freely without worrying about criticism. The focus is on collecting a wide range of ideas first and then selecting and improving the most practical ones through collaboration. This approach helps teams discover innovative solutions, understand different viewpoints, and make better decisions. It is an effective technique for organizing ideas and promoting teamwork, whether members are working together in the same place or collaborating from different locations.
