Customer Problem Statement:

Customer Problem Statement:

Organizations often face delays and inefficiencies in managing network-related service requests due to manual processing, inconsistent approval procedures, and limited visibility into request status. The **Automated Network Request Management in ServiceNow** solution addresses these challenges by automating the complete request lifecycle. Users can easily submit network service requests through a self-service portal, while ServiceNow automatically validates the request, routes it for approvals, creates the necessary tasks, and assigns them to the appropriate network support team. The solution can also integrate with network automation tools to enable faster and more accurate request fulfillment where applicable. By reducing manual effort and standardizing workflows, the system improves response times, ensures better SLA compliance, enhances service quality, and provides real-time tracking and transparency for both end users and IT administrators.

Aspect	Description in context of our project
 I am	 We are ServiceNow developers and IT automation enthusiasts working on building an automated network request management solution.
 I'm trying to	 Build a streamlined way for users to submit network requests and automate the entire approval, fulfillment and notification process.
 But	 Currently, the process is manual and time-consuming, leading to delays, errors, and limited visibility.
 because	 Requests are routed through emails and spreadsheets with no automation, proper tracking or SLA compliance.
 which makes	 The solution valuable by providing faster request handling, improved accuracy, better transparency, and higher user satisfaction.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An employee requesting a network service	Submit a network request quickly and track its status	The approval and request process is slow and requires multiple manual steps	Requests are handled manually and lack automation	Frustrated due to delays and lack of visibility
PS-2	An IT network administrator	Process and fulfil network requests efficiently	Managing approvals , assignments, and updates manually is time-consuming	There is no automated workflow to route and manage requests	Overloaded and concerned about meeting SLA deadlines
