

Ideation Phase

Empathize & Discover

Date	28 June 2026
Project Name	Automated Network Request Management in ServiceNow
Name	Kavyasri Meghana karunakaram
Maximum Marks	4 Marks

Empathy Map Canvas

An **Empathy Map** is a visual framework used to gain a deeper understanding of users by capturing their thoughts, feelings, behaviors, and experiences. It enables project teams to view a problem from the user's perspective and identify what users truly need from a solution.

Developing an empathy map encourages teams to focus on the user's goals, expectations, challenges, and concerns before designing a solution. This user-centered approach helps create systems that are more effective, practical, and aligned with customer requirements.

Uses of an Empathy Map

- Provides a clear understanding of user requirements and concerns.
- Helps teams analyze situations from the user's point of view.
- Identifies user challenges, frustrations, and expectations.
- Improves collaboration and communication among project members.
- Supports the development of user-focused and efficient solutions.
- Assists in designing products and services that enhance customer satisfaction.

EMPATHY MAP

SAYS

1. "I need my network request to be approved quickly."
2. "I don't know who is handling my request."
3. "I have already sent an email but haven't received any update."
4. "Can I track my request status online?"
5. "Why is the approval taking so long?"

FEELS

1. Frustrated because approvals are delayed.
2. Confused due to lack of status updates.
3. Stressed when urgent work depends on the network request.
4. Uncertain about whom to contact.
5. Satisfied when requests are processed quickly.

THINKS

1. There should be an easier way to submit network requests.
2. The approval process should be transparent.
3. I shouldn't have to repeatedly contact the IT team.
4. The organization should automate repetitive tasks.
5. My request should reach the correct team automatically.

DOES

1. Sends emails or fills out request forms.
2. Contacts the IT or Network team for updates.
3. Waits for manager approval.
4. Follows up several times if there is no response.
5. Keeps checking whether the request has been approved.

PAINS

- Manual processing of network requests.
- Slow approval process.
- No real-time request tracking.
- Manual task assignment.
- Communication gaps between users and support teams.
- Risk of duplicate requests and human errors.

GAINS

- Easy online request submission.
- Faster automated approvals.
- Real-time status tracking.
- Automatic task assignment.
- Email notifications at every stage.
- Improved efficiency, transparency, and user satisfaction.
